Dear Madam, Sir,

I am excited to be applying for your company's Intern position. I am a third-year engineering student at ESPRIT in Tunisia. My degree emphasis is Software Engineering and web development , and I am looking for an end of studies internship for a period of 4 to 6 months.

Last summer, I worked as an Intern for ESPRIT-TECH RDI department, I was able to engage in the conception and development of an e-learning platform using Service Oriented Architecture , and to be able to understand the GDPR rules and fundamentals while implementing them into the development of the project. Also this internship was a practical introduction to smart contracts and the way of implementing it into our project.

I also did other internships, which are presented in my CV, and which allowed me to deepen my knowledge in various tools and programming languages, and also to be versatile while working within a team.

During my academic years, I was able to learn and acquire new technical skills in my specialty. I also learned and improved my teamwork skill through the academic projects that I've worked on which allowed me to better understand how to carry out a group project and how to manage its tasks within the team.

Among these projects, I cite the most recent one which consists in creating a social network that aims to reach people from different fields, dedicated to professional use and career development. It can be used by students, teachers, developers, etc.

This project was carried out in a group of 4 people and was developed using MERN Stack among other various tools, I would also like to mention that this project was nominated among the best projects of the year at ESPRIT.

I am motivated, open to others and dynamic and I am very interested and passionate about web development.

Thank you for taking the time to review my candidacy for your internship opportunity and for the attention to my application. I remain at your disposal for any further information.

Moetez Ayari.
